

Validated Requirements Set

Matthew Le · Revision 47

R-01 · functional

Requirement: The system must represent a slot awaiting final confirmation and an arrived visitor who cannot move forward as two separate statuses, each with one shared definition used by both Scheduling and Intake.

Source: W04-S01 · Dana Ruiz

Rationale: One label currently covers two different conditions, so Intake could not tell a visitor with a 9:30 confirmation what would happen next (W04-S01).

Acceptance check: In a review with Dana Ruiz, show one appointment awaiting final confirmation and one arrived visitor who cannot proceed. Intake and Scheduling staff each identify both statuses correctly, and no single status label is used for both conditions.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Agreed decision: "Held" will no longer cover two conditions. A slot awaiting final confirmation (Scheduling's meaning) and an arrived visitor who cannot move forward (Intake's meaning) are recorded as two separate statuses, each with one shared definition used by Scheduling and Intake. An appointment is ready only when it is neither of these. Confirmed by Dana Ruiz for the intake workflow. Supports R-01 and R-02.

R-02 · user

Requirement: When an appointment status is in exception, authorized intake staff must be able to see which status condition applies, who last changed it, and the next approved step, without contacting another team.

Source: W04-S01 · Dana Ruiz

Rationale: Staff currently call around while the visitor waits because they cannot see why an appointment is stuck or what should happen next (Dana Ruiz conversation; W04-S01).

Acceptance check: In a walkthrough with Dana Ruiz, present an appointment in exception. An intake staff member identifies the applicable condition, the person who last changed it, and the next approved step using only the system, with no phone call or message to another team.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Agreed decision: "Held" will no longer cover two conditions. A slot awaiting final confirmation (Scheduling's meaning) and an arrived visitor who cannot move forward (Intake's meaning) are recorded as two separate statuses, each with one shared definition used by Scheduling and Intake. An appointment is ready only when it is neither of these. Confirmed by Dana Ruiz for the intake workflow. Supports R-01 and R-02.

R-03 · functional

Requirement: The system must allow a same-day slot to be offered only after both a room and a qualified clinician are confirmed available for that slot; an open calendar time alone must not make a slot available to offer.

Source: W04-S02 · Dr. Lena Okafor

Rationale: An open calendar time does not prove a room or clinician is ready, so offering on calendar openings alone leads to start times Intake cannot honor (Dr. Lena Okafor conversation; W04-S02).

Acceptance check: In a review with Dr. Lena Okafor, test three same-day cases: room and clinician both available, room only, and clinician only. Only the first case can be offered; the other two cannot be offered even though the calendar time is open.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: Agreed decision: A confirmation or open calendar time does not establish readiness. Readiness is confirmed only when both a room and a qualified clinician are available. If readiness changes after confirmation, affected staff and the visitor receive an updated expectation with no clinical details. Confirmed by Dr. Lena Okafor for capacity and readiness rules. Supports R-03 and R-04.

R-04 · functional

Requirement: When room or clinician readiness changes after an appointment is confirmed, the system must give the affected staff and the visitor an updated expectation that contains only the information they need to act and no clinical details.

Source: W04-S02 · Dr. Lena Okafor

Rationale: A confirmed time can become wrong after readiness changes, and staff and visitors need a current expectation without exposure to clinical information (Dr. Lena Okafor conversation; W04-S02).

Acceptance check: In a review with Dr. Lena Okafor, change room or clinician readiness on a confirmed appointment. The affected staff and visitor receive an updated expectation, and a review of the update confirms it contains no clinical details.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: Agreed decision: A confirmation or open calendar time does not establish readiness. Readiness is confirmed only when both a room and a qualified clinician are available. If readiness changes after confirmation, affected staff and the visitor receive an updated expectation with no clinical details. Confirmed by Dr. Lena Okafor for capacity and readiness rules. Supports R-03 and R-04.

R-05 · functional

Requirement: The system must keep a visitor's language, communication, and approved support needs attached to the appointment and available to authorized staff at confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: The visitor's communication preference appeared in the access team's view but not in the intake queue, so support needs were lost between steps (Priya Shah conversation; W04-S03).

Acceptance check: In a review with Priya Shah, record language, communication, and support needs on an appointment, then confirm, reschedule, and check it in. Authorized staff can see all three needs at each of the three steps.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Agreed decision: Language, communication, and approved support needs are recorded once and stay attached to the appointment, so authorized staff can see that support is arranged at confirmation, rescheduling, and check-in without asking the visitor to repeat it. Visitors who cannot use the portal have an equivalent phone or staff-assisted route. Confirmed by Priya Shah for access and communication needs; field-level permissions are confirmed by Jordan Kim. Supports R-05 and R-06.

R-06 · user

Requirement: A visitor who cannot use the portal must be able to confirm, reschedule, check in, and state support needs through an equivalent phone or staff-assisted route, so access to the service does not depend on one digital channel.

Source: W04-S03 · Priya Shah

Rationale: Visitors who cannot use the portal would otherwise lose access to scheduling and support, and the service must remain available to them on equal terms (Priya Shah conversation; W04-S03).

Acceptance check: In a review with Priya Shah, complete confirmation, rescheduling, check-in, and recording a support need for one visitor using only the phone or staff-assisted route. Every task can be completed without the portal, with the same outcome as the portal route.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Agreed decision: Language, communication, and approved support needs are recorded once and stay attached to the appointment, so authorized staff can see that support is arranged at confirmation, rescheduling, and check-in without asking the visitor to repeat it. Visitors who cannot use the portal have an equivalent phone or staff-assisted route. Confirmed by Priya Shah for access and communication needs; field-level permissions are confirmed by Jordan Kim. Supports R-05 and R-06.

R-07 · constraint

Requirement: Shared displays must show only the minimum appointment status staff need for the task, and any detailed visitor information must be available only to staff whose role and authorized access permit it.

Source: W04-S04 · Jordan Kim

Rationale: Status must be visible enough for staff to act, but shared displays can be seen by people who are not authorized to view visitor details (Jordan Kim conversation; W04-S04).

Acceptance check: In a review with Jordan Kim, compare a shared display with the detailed view for two staff roles. The shared display shows status only, and detailed information appears only for the role authorized to see it.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Agreed decision: Shared displays show only the minimum status needed for the task; detailed information, including support needs and who changed a status, is visible only to staff whose role authorizes it. Every status change records who made it, the previous value, the new value, and the time, and this history remains available to authorized reviewers during an exception review. Confirmed by Jordan Kim for access, audit, and availability constraints. Supports R-02, R-05, R-07, and R-08.

R-08 · functional

Requirement: For every appointment status change, the system must record who made the change, the previous value, the new value, and the time of the change, and that history must remain available to authorized reviewers during an exception review.

Source: W04-S04 · Jordan Kim

Rationale: Staff resolving an exception need a reliable record of how the status reached its current state, and accountability requires knowing who changed it and when (Jordan Kim conversation; W04-S04).

Acceptance check: In a review with Jordan Kim, change one appointment's status twice, then open an exception review. Both changes appear with the person, previous value, new value, and time, and an authorized reviewer can view the full history.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Agreed decision: Shared displays show only the minimum status needed for the task; detailed information, including support needs and who changed a status, is visible only to staff whose role authorizes it. Every status change records who made it, the previous value, the new value, and the time, and this history remains available to authorized reviewers during an exception review. Confirmed by Jordan Kim for access, audit, and availability constraints. Supports R-02, R-05, R-07, and R-08.

Professional Guidance Assessment

IIBA: IIBA is a professional association that defines and supports the practice of business analysis. Its BABOK Guide describes how analysts elicit needs from stakeholders, analyze them, and confirm requirements with the people who own them. I followed that process by visiting each stakeholder, checking their source record, and recording who confirmed each decision.

ISO/IEC/IEEE 29148: Together, they publish ISO/IEC/IEEE 29148, which sets the standard for requirements engineering. It describes the qualities a good requirement must have, such as necessary, unambiguous, verifiable, feasible, and singular, and how requirements should be structured and traced. I used those qualities to test each of my eight statements.

PMI: PMI focuses on project delivery, while Week 4 focuses on defining what the system must do before any design or project plan exists. PMI is related because requirements feed project scope and planning, but IIBA and ISO/IEC/IEEE 29148 are the sources that guide how requirements themselves are elicited, written, and validated.

Application: The guidance helped me make R-01 more clear by replacing the word "held," which Scheduling and Intake used for two different conditions, with two separately defined statuses. The 29148 quality of being unambiguous showed me the problem was the shared label, not the staff. I also kept R-01 free of design by not naming new status labels or screen elements.

Prepared in Command Nexus. Canvas remains the official submission point.
