What needs confirmation?

1. People and roles

QA and night-shift operators

Nia Voss, Night QA Supervisor, states that operators use the cell through the night and can describe details she may not see, while she supervises the shift (W03-S01). No operator has been selected for the review yet, so the night-shift operator is recorded as a missing voice rather than a consulted participant. Nia's account covers her own part and does not speak for the operators.

Engineering

Elias Chen, Robotics Systems Engineer, can explain what the available command and scheduler records show and can review technical interpretations. He needs read-only exports with source details, and he asks for the record custodian to attend a short access discussion before anyone promises delivery dates (W03-S02).

His limits are explicit. He cannot identify the origin of the repeated command from the evidence supplied so far. Technical expertise is not proof that he owns every record, and it is not authority to approve spending. A proposed restart remains a proposal, not a confirmed solution (W03-S02).

His influence is therefore advisory on technical feasibility and on what the records can and cannot show. His request for an access discussion is a request: asking does not mean access is approved or that the right person has accepted the responsibility.

Operations

Mara Ilyan, Production Operations Manager, coordinates. She carries the Week 2 recommendation into review whether it proposes proceeding, revising, deferring or declining, and her request does not approve

the project. Operations needs a clear route for decisions and a usable summary of who must be consulted (W03-S04).

She can confirm contacts and convene the session, and Operations routes recommendations to the authorizing sponsor (W03-S04, W03-S03). She cannot approve the work or its funding: she is not established as the spending approver, and the sponsor role holds that authority (W03-S04, W03-S03). Her proposal of a single daytime meeting is also unsettled, since Nia asked for night-shift participation and no agreement on timing is recorded (W03-S01, W03-S04).

Sponsor and record custodian

Authorizing sponsor. Known responsibility: the sponsor role can authorize the proposed work within the organization's approval process, and Operations routes recommendations to it. Missing: the packet does not identify the person holding the role, their specific limits, or any signed approval. What needs confirmation: who holds the role, what they can authorize, and what they would need in order to decide (W03-S03).

Record custodian. Known responsibility: the role would hold the records and the access arrangements the review depends on, and Elias needs that person present for a short access discussion before delivery dates are promised (W03-S02). Missing: the register's custodian entry has no named contact, and the supplied extract contains no confirmation that a custodian accepted that responsibility. What needs confirmation: the person's name, whether they accept the responsibility, and what they require before releasing read-only exports (W03-S03).

Neither person is named here, because naming one would be an invention. A contact appearing on a meeting list is not evidence of consent, availability, ownership or decision authority, and these missing entries are follow-up questions rather than proof that nobody in the organization holds those responsibilities (W03-S03).

2. Relationships and next steps

Competing needs and tradeoff

Mara proposes a single daytime meeting, which suits Operations and keeps the review to one session (W03-S04). Nia asks that sessions be arranged around shift duties and that a night-shift operator take part, because the operators run the cell at night and can describe details she does not see (W03-S01). Both needs are reasonable, and a single daytime meeting cannot satisfy the second one. No agreement on timing is recorded (W03-S04).

A way to hear both: keep the daytime session for Operations, Engineering and QA supervision, and add a short shift-specific interview with a night-shift operator, arranged around shift duties, with its findings brought back to the main session. Nia has asked to be consulted on what arrangement could work before

QA's attendance is committed, so the operator would be identified and asked first rather than scheduled.

This is my proposal as the analyst. Neither Mara nor Nia has agreed to it, and no operator has been selected or interviewed (W03-S01).

Consultation plan

QA. Nia Voss. Ask which parts of the night workflow the proposed record-checking would change. Interview, before any session is scheduled, since she asked to be consulted before QA's attendance is committed (W03-S01).

QA operators. A night-shift operator, once Nia helps identify one. Ask what happens during an exception, from noticing it to recording it. Short shift-specific interview around shift duties, after the operator agrees and before requirements interviews. None selected yet (W03-S01).

Engineering. Elias Chen. Ask what the records show and what he needs to review them. Interview, then the short access discussion with the custodian, before any delivery date is promised (W03-S02).

Operations. Mara Ilyan. Ask what route a decision takes to the sponsor and who must be consulted. Interview, then a workshop once participants are confirmed (W03-S04).

Record custodian. Ask Operations to name the person, then ask whether they accept the responsibility and what they need before releasing read-only exports (W03-S03).

Sponsor. Ask Mara to identify the role holder, then ask what they can authorize and what they need to decide (W03-S03).

People with little formal authority still need a voice because the operators hold knowledge that exists nowhere else and absorb whatever is decided. Consulting someone grants no decision right, so including them costs nothing in authority and leaving them out costs accuracy.

Missing voices and validation

Question 1: who is the record custodian, and have they accepted that responsibility? The register's custodian entry has no named contact, and the extract contains no confirmation that anyone accepted the role (W03-S03). Elias has asked for a short access discussion before delivery dates are promised, but asking is not approval (W03-S02). Operations should seek the name, since Mara can seek contact confirmation (W03-S04). I will record the answer as a dated entry naming the person, the records they hold, whether they accepted the responsibility, and what they need before releasing read-only exports. If no reply arrives, the entry stays as an open question with the date it was asked. Silence is recorded as no answer, not as acceptance.

Question 2: who holds the authorizing sponsor role, and what are their limits? Operations routes

recommendations to the sponsor, and the role can authorize the work within the approval process, but the packet does not identify the person, their specific limits, or any signed approval (W03-S03). Mara carries the recommendation into review and is not established as the spending approver (W03-S04), so she is the right person to seek confirmation through Operations' normal routing. I will record the answer as the role holder's name, what they can authorize, and what they would need in order to decide, each marked as confirmed or unconfirmed with its source. Until that is answered, the map shows the sponsor as a role with decision authority and no confirmed holder.

Neither question is answered by a name appearing on a meeting list, which is not evidence of consent, availability, ownership or decision authority (W03-S03).

Next step toward requirements

Three confirmations are needed before requirements conversations begin. First, Operations names the record custodian and confirms whether that person accepts the responsibility, which unblocks the access discussion Elias has asked for (W03-S03, W03-S02). Second, Mara identifies the authorizing sponsor and their approval limits, so the work is not scoped against authority nobody has confirmed (W03-S03, W03-S04). Third, Nia helps identify a night-shift operator who agrees to take part, since none has been selected (W03-S01).

Timing is decided alongside those confirmations rather than before them, because who must attend determines when the session can be held. No agreement on timing is recorded (W03-S04).

Mara has asked for the unanswered questions to stay visible, and they belong at the start of the requirements conversations rather than being resolved by assumption.

3. Book evidence connection

Book form connection

Prompt 33 changed the consultation plan. Writing identity-building questions made me notice that my plan asked people about the review rather than about what they bring to it. The question "what do you know about how this cell actually runs that is not written down anywhere" is aimed at undocumented knowledge, and that is exactly what the night-shift operator holds and what the packet currently lacks, since it contains Nia's account rather than interviews with the operators (W03-S01). I moved that question to the front of the operator interview instead of opening with questions about the proposed workflow.

Prompt 32 did something similar for the custodian gap. Choosing a record request log as one of the tools turned "the custodian entry has no named contact" from a blocked meeting into a tracked item with a person, a date and an access status (W03-S03), which is what Elias needs before anyone promises delivery dates (W03-S02).
